

Path 1: Pre Security > Module 4: Computer Fundamentals

<https://tryhackme.com/module/computer-fundamentals>

Before you can secure technology, you need to understand how it works. Explore what's inside a computer, from hardware basics to the cloud.

This module covers the fundamentals of how computers work. You'll start by exploring what's inside a computer, the components that make it tick and how they work together. From there, you'll discover the different types of computers and their specialisations, learn how systems communicate with each other through client-server relationships, and explore how virtualisation lets us create multiple virtual machines from a single computer. The module wraps up with cloud computing, showing how virtualisation scales up to power the services we use every day.

Room 1: Inside a Computer System

This room covers the basic components of a computer system.

Room 2: Computer Types

Explore the different types of computers, from laptops to the tiny chips inside your coffee machine.

Room 3: Client-Server Basics

This room teaches the basics of the Client-Server model.

Room 4: Virtualisation Basics

Learn why virtualisation powers modern IT, improving efficiency and safely isolating environments.

Room 5: Cloud Computing Fundamentals

Discover how cloud computing helps businesses move faster, do more, and scale with less effort.
