> Room 1: Offensive Security Intro

Hack your first website (legally in a safe environment) and experience an ethical hacker's job.

>> Task 1: What is Offensive Security?

This is the core of "**Offensive Security**." It involves breaking into computer systems, exploiting software bugs, and finding loopholes in applications to gain unauthorized access. The goal is to understand hacker tactics and enhance our system defences.

Q1) Which of the following options better represents the process where you simulate a hacker's actions to find vulnerabilities in a system?

Offensive Security

Defensive Security

>> Task 2: Starting the Lab

The screenshot displays the FakeBank web application in a Mozilla Firefox browser. The page header includes the FakeBank logo, a navigation menu for 'Our Products & Services', and a 'Safe & Secure Internet Banking' status with a lock icon. Below the header, the user's name 'Mrs G. Benjamin' and 'Bank Account Number: 8881' are shown, along with a notification icon indicating 3 unread messages.

The main content area is divided into two sections. On the left, under the heading 'Accounts', there are two account cards: a 'Classic Account' with a balance of -\$1,232.32 and a 'Credit Card' with a balance of \$0.00. On the right, the 'Transactions' section shows a list of recent transactions categorized by date.

Account Balance: -\$1,232.32

Transactions:

Date	Merchant	Amount
Today	Fast Food	\$17.11
	Apple	\$1804.77
	Travel	\$19.58
	Netflix	\$9.99
	Amazon	\$77.43
Yesterday	Shopping	\$73.08
	Starbucks	\$6.76
	Hotel	\$140.00

Q1) What is your bank account number in the FakeBank web application?

Answer: 8881

>> Task 3: Your First Hack

To find hidden URLs, we will use a tool called **dirb**. This tool uses a brute-force approach, by taking a list of potential page names and testing one by one if they exist in your website. This approach works because people use predictable names a lot of times.

Tool: **dirb**

Syntax: **dirb <website_url>**

Command: **dirb http://fakebank.thm**

The tool uses the default wordlist included with the tool, located at **/usr/share/dirb/wordlists/common.txt**.

Q1) Dirb should have found 2 hidden URLs. One of them is **http://fakebank.thm/images**. What is the other one?

Answer: <http://fakebank.thm/bank-deposit>

>> Task 4: Adding Funds to Your Account

You should have found a secret page that allows you to add funds to a bank account (<http://fakebank.thm/bank-deposit>). Type the hidden page into the FakeBank website using the browser's address bar.

Q1) If your balance is now positive, a pop-up should appear with some green words in it. Input the green words as the answer to this question (all in uppercase). (You may need to hit Refresh if you closed the pop-up already)

Answer: BANK-HACKED
